NON-GYN CYTOPATHOLOGY REPORT

Patient: LAMB, EDDIE M

Med Rec#: 3045159

PV: 174906728

DOB: 08/03/1951 Age: 68 Sex: F

Physician(s):

NEAGLE MARK MD

POUDRE VALLEY HOSPITAL

Accession #: 12103712

Date Collected: 05/22/2020

Date Received: 05/25/2020

Date Reported: 05/26/2020

Test Requested: PVH Non-Gyn Cytology

Result ID: VC20-00350

FINAL DIAGNOSIS:

LEFT PLEURAL FLUID, THORACENTESIS CYTOLOGY:

1. SATISFACTORY FOR EVALUATION.
2. NO MALIGNANT CELLS IDENTIFIED.
3. FEW MIXED INFLAMMATORY CELLS, PREDOMINANTLY HISTIOCYTES, AND REACTIVE MESOTHELIAL CELLS PRESENT.

Michael Walts, MD

Pathologist, Electronic Signature

Clinical History: Pleural effusion

GROSS DESCRIPTION:

LT PLEURAL: Received unfixed, labeled with the patient's name, are 500 mL of yellow, hazy fluid. Routine ThinPrep is performed. One cell block is prepared using buffered 10% formalin.

MICROSCOPIC DESCRIPTION:

One ThinPrep slide and one H&E from cell block reviewed. Abundant epithelioid cells and few inflammatory cells, predominantly histiocytes, are present. Immunohistochemistry is performed with appropriately staining controls. The epithelioid cells are positive for calretinin and a few are positive for cytokeratin 5/6. No significant staining is seen for MOC31 and Ber-EP4. The findings are consistent with mesothelial cells with reactive features in the background of histiocytes. A CMV stain is reviewed and is negative.
